Beskrivelse:

Elinchrom Umbrella Deep Silver 105cm

Umbrellas are renowned for their ease and speed of use, but not all umbrella systems are equal.

The wide angle internal reflector within each Elinchrom light source smoothly illuminates the complete surface of all umbrellas. Contributing to this is the exceptional quality of our carefully selected fabrics.

Combined with our unique central umbrella tube location, these elements together deliver an affordable quality of light which is unsurpassed.

Elinchrom deep umbrellas are manufactured using 16 fiberglass rods to maintain a perfect circular shape.

Silver Deep Umbrella

The Silver umbrella offers a more crispy light providing greater specularly and texture.

By simply adjusting the position, the deep shape offers control of the light spread. In addition, these umbrellas can be transformed into "fold-up" softboxes by adding for example, a translucent cover to a silver umbrella, a silver/black cover to a translucent umbrella with many further options.

Specification

Diameter: 105 cm

16 fiberglass rods for circular shape

Total control of light spread

Includes portable umbrella sleeve

Optional diffuser for versatility
