Beskrivelse:

Fujinon Teleconverter XF 1.4X TC WR

- 1.4x teleconverter extends the reach of select X-mount lenses by 40% with only a one-stop loss in exposure
- Advanced design maintains the original quality of lenses as well as fully supports exposure metering and image stabilization capabilities
- Weather-resistant design for use in adverse conditions and temperatures as low as 10°

Extend the reach of your XF 50-140mm f/2.8 R LM OIS WR and XF 100-400mm f/4.5-5.6 R LM OIS WR lenses with the XF 1.4x TC WR Teleconverter from Fujifilm.

The X mount converter magnifies the image by 1.4x and retains full communication between the lens and body, enabling metering, autofocus, and image stabilization as well as the transmission of EXIF data.

Additionally, the teleconverter is designed to maintain the weather resistance of the entire Fujifilm system with a sealed construction that reduces the chances of dust, water, or even the cold from affecting performance.

Compatible lenses:

- XF 80mm f/2.8 R LM OIS WR Macro
- XF 50-140mm f/2.8 R LM OIS WR
- XF 70-300mm f/4-5.6 R LM OIS WR
- XF 100-400mm f/4.5-5.6 R LM OIS WR
- XF 150-600mm f/5.6-8 R LM OIS WR
