Beskrivelse:

Godox X1R Wireless Receiver for Sony

- Up to 5 groups and 32 channels
- Uses the 2.4GHz band
- Sync speed up to 1/8000s
- Range up to approximately 100 meters
- Can also be used as a camera shutter release
- LCD display for easy operation
- 2.5mm sync and shutter button input and output
- Operates on two AA batteries
- Micro USB connector for firmware upgrades

If you use the Godox X1 receiver in combination with the Godox X1T-C transmitter, you can create a wireless TTL system to fire your reportage flash or flash head up to a distance of a hundred meters.

The receiver uses the 2.4GHz frequency band for interference-free operation. In addition, you have access to up to five groups and 32 channels. The five groups can be individually set to TTL, manual or off. When needed, you can use TTL and manual groups simultaneously for added convenience.

Many useful functions

An extra handy feature is that you can also use the receiver as a shutter release for your camera. Operation is simple thanks to the clearly readable LCD display. The X1R-C supports TTL High Speed Sync and most of the similar features popular TTL triggers have, such as HSS pre-sync timing adjustment.

Another small, but important detail: the receiver has a PC-sync input and output.

Specifikationer:

Producent	Godox
Kategori	Flash trigger
Leverandør	Godox
