Beskrivelse:

Hasselblad XH Converter 0,8

The XH Converter 0,8 brings new opportunities to Hasselblad photographers with the ability to unlock a whole new set of H System lens capabilities. The XH Converter 0,8, used on HC/HCD lenses attached to an X System or 907X camera, reduces the focal length of the lens by a factor of 0,8x, which delivers a wider field of view and improves the maximum aperture of the lens by two-thirds of a stop.

Additionally, the XH Converter 0,8 improves lens performance in terms of contrast and apparent sharpness across the entire frame.

Specifikationer:

Producent	Hasselblad
Kategori	Objektiv adapter
