Beskrivelse:

Your biggest creative vision in exquisite black and white

The XF IQ4 150MP Achromatic Camera System, built on the Infinity Platform with Capture One Inside, captures crisp, high resolution images that extend beyond the light that the eye can see, expanding your creative possibilities while at the same time removing color from the equation. The XF IQ4 150MP Achromatic Camera System is high resolution photography at its most pure.

151-Megapixels

The extreme 151-megapixel resolution captures unprecedented detail, giving you the flexibility to print on a large scale or conveniently crop images to achieve the exact composition required.

Backside Illuminated (BSI) Sensor

The IQ4 150MP Backside Illuminated (BSI) sensors introduces the new standard of digital sensor technology to full frame medium format photography. The IQ4 150MP BSI sensor's ultra-efficient pixel design results in the uninterrupted capture of light within each pixel, directly translating a more accurate render with improved color, detail and noise handling within the RAW file.

Achromatic Sensor

The Achromatic 151-megapixel BSI sensor is produced without the Bayer color filter, allowing light to reach the sensor unobstructed. Without the filter, each and every pixel of the sensor captures significantly more light, ensuring absolute detail and luminance.
The Achromatic can capture much more than the naked eye is able to see, as it is designed to capture a broader spectrum of light. With the option to also capture light outside the visible spectrum, creative possibilities for infrared applications are endless, making the Achromatic the most light-sensitive medium format digital system available.

Capture One Inside

The cutting-edge RAW editing core of Capture One has been directly integrated in the Infinity Platform, providing advanced control within preview and image settings, and opening the door for future customization of the RAW file at the time of capture. Capture One Inside ensures the most efficient and controlled capture workflow, bringing the capture and post-capture workflows closer together than ever before.

Today, Capture One Inside delivers:

- IIQ RAW file "Style" integration
- JPEG processing in-camera
- Improved image quality and preview performance
- Improved Live View, faster frame rates, new tools

Future-Proof Tethering Options

Attuned to the professional workflow, multiple tethering options capable of handling the high bandwidth are included in the IQ4 – Ethernet, USB-C and Wireless. All tethering and local storage options can be combined and customized to address your specific workflow needs.

Wireless tethering can be used to transfer RAW files to Capture One in addition to storing them in-camera. This solution can be used as a backup or as part of a custom workflow.

Ethernet grants the potential for a fully customized, integrated and dynamic workflow, providing the potential to capture into or through any Ethernet supported device. In addition, the long cable lengths and power provided via Ethernet eliminates workflow concerns surrounding battery power or cable length.

USB-C provides a standard port type for convenient tethering on a wide variety of common devices. USB-C also delivers multiple power integration options.

Ethernet and USB-C allow data transfer and system integration with no additional accessories necessary – transfer from local storage to any host without removing the card. And with a variety of cable lengths available, both Ethernet and USB-C can be exactly configured to suit your workflow needs.

Specifikationer:

Producent	Phase One
Kategori	Mellemformat
Mellemformatsenhed	Camera + Back
