### Beskrivelse:

The Dome Diffuser gives a softer, less directional light and is often used to spread the light wider in all directions. You can use it to bounce flash off a surface such as a white wall or most commonly, the ceiling. Making for a softer and gentler light that falls off on the person you're shooting. Used direct, the light is soft and pleasingly crisp, and makes for great people photography.

The Diffuser clicks on and off the A1 quickly and easily thanks to the smart magnetic mount, and it's stackable so you can use it in combination with other light shaping tools like a CTO gel, for example. All of which allow you to be more creative with light.

### Features

- Diffuses the light for a soft and crisp light
- Easily clicks on and off the A1's magnetic mount
- Can be stacked with other A1 modifiers
- Lightweight and portable

# Goecker for shooters

## Specifikationer:

Producent	Profoto
Kategori	Diverse flashtilbehør
Leverandør	Profoto
