## Beskrivelse:

Control the shoot from the palm of your hand.

The standard Air Remote can be used to wirelessly sync and control your Profoto Off-Camera Flash from any camera that has a hot shoe.

Unlike the Air Remote TTL-C (for Canon) and the Air Remote TTL-N (for Nikon), the Air Remote does not provide TTL functionality. But the sensation of shooting without cords and without restraints is the same.

The impressive operating range of 300 m (1,000 ft) is also the same.

Note that the Air Remote uses the world's fastest system for remote radio sync and control, allowing you to shoot with less delay and higher reliability.

## Features

- The world's fastest system for remote radio sync and control, fast enough to match a sync cable
- Unbeaten operating range of 300 m/1,000 ft.
- Open frequency band (2.4 GHz)
- Approved for worldwide use
- Small and handy
- Can be used to sync any flash brand
- Can be used as remote shutter release for most cameras
- Can be used as remote control for Profoto flashes with Air built-in

# Goecker for shooters

## Specifikationer:

Producent	Profoto
Kategori	Flash trigger
Leverandør	Profoto
