Beskrivelse:

Syncs and manually controls any Profoto Air light

Shoot without restraint. The Air Remote can wirelessly sync and control any Profoto light (that has built-in Air) with any camera that has a hot shoe. Unlike the AirTTL remotes, the Air Remote doesn't provide TTL or HSS but it still provides the incredible sensation of shooting without any cords to cramp your creativity.

Air Remote uses the fastest system available for remote radio sync and control, and operates over the same impressive range of 300 m (1,000 ft). The Air Remote makes you less limited in which shutter speeds you can use. Shoot with more precision, higher trigger reliability and less delay - a whole lot more freedom.

Profoto Air Remote Features

- The world's fastest system for remote radio sync and control, fast enough to match a sync cable and to sync your flash at shutter speeds up to 1/1600s (if your camera supports it)
- Small and handy
- Sync and manually control any Profoto light that is compatible with Air
- Sync any flash brand or use it as remote shutter release for most cameras
- Long operating range of 300 m
- 8 digital channels
- Controls up to 6 groups of lights on each channel
- Approved for worldwide use
