Beskrivelse:

Profoto A2

- Super compact size and low weight
- Powerful 100Ws flash and fast flash recycling
- Built-in reflector and lens that creates a natural light spread with smooth fall-off
- Fully compatible with all magnetic Profoto Clic Light Shaping Tool
- Integrated AirX connectivity for full compatibility with all Profoto remotes and app
- Clean and easy user interface with large hi-resolution display
- Built-in LED focus/modelling light

The little big light

It's incredibly compact and packs a considerable punch of a 100 Ws with a weight of only 500 grams.

This is a light that you really can bring anywhere and everywhere.

Throw it in your bag or a jacket pocket, and you're ready to make the most of whatever location you might find yourself in. You could be shooting at a wedding, an awards ceremony, or in a restaurant - the Profoto A2 is perfect when space is at a premium and time is short.

Easy to use

Like all Profoto lights, the A2 is easy and intuitive to use; you'll go from box to first flash in record time. Yes, it comes with an instruction manual, and no, you probably won't have to bother reading it. And the A2 connects to the broader universe of Profoto products with AirX connectivity built-in.

You can use the A2 as a part of a more extensive lighting system, and you can shoot with any camera, including a smartphone. Enjoy the freedom of choosing where you make adjustments to all settings. Either via the user friendly large display on the flash or via the Profoto app. It's totally up to you.

The Profoto A2 is a creative tool

It exists to help the ambitious photographer capture striking and beautiful images. So, like all flashes in the Profoto range, the flash head is round, delivering light that's natural and beautiful. The creative possibilities become almost endless when you combine the A2 with the Profoto Clic System - a series of light shaping tools bespoke to A-series flashes.

A wide range of light shaping tools like the Clic Softbox, gels, grids, and the new Clic Snoot and Barndoor are available. Factor in the Clic OCF Adapter II, and then suddenly Profoto's entire range of OCF light shaping tools are available to use as well. All of which means this is a must-have light for image creators who want to push the limits of what's possible on location - because the truth is with the Profoto A2 - great light will always be with you
