Beskrivelse:

Electronic Viewfinder EVF-11

- External Electronic Viewfinder compatible with the SIGMA fp and fp L mirrorless digital cameras
- 0.5 inch, approx. 3.58 M dots OLED panel
- High-resolution, high-luminance viewfinder
- Magnification of 0.83x

Large viewfinder for clarity and comfort

The EVF-11 has a 0.5 inch organic electroluminescent diode (OLED) panel with approx. 3.68 M dots of resolution. With a magnification of 0.83x, this high-luminance, high-definition EVF provides excellent visibility and is especially useful in an environment where it is difficult to see the screen clearly. Photographers can use it to frame a shot, review an image and change menu settings smoothly.

90° upward tilting mechanism

The tilting mechanism of the EVF-11, which angles upwards to 90°, enables users to shoot from a low angle more comfortably.

User interface designed for superb visibility and convenience

The EVF-11 has an eye point set at approx. 21 mm to ensure a full field-of-view without a dark vignette around the viewfinder. This helps photographers see the entire scene with complete clarity, even when wearing glasses. It has a wide diopter adjustment range of -4.0 to +3.0 dpt, and comes with two eyecups of different sizes to suit your preference. The EVF is designed for the best visibility, ease of use and comfort for photographers, giving them a complete view of their subject in perfect detail.

Audio monitoring during video capture

A 3.5 mm stereo mini jack on the EVF-11 allows users to monitor audio using headphones while shooting video. It is designed so as not to block the camera's microphone input, meaning users can use an external mic and monitor audio at the same time.

External recording to portable SSD

Users can record to an external SSD drive via the dedicated USB plug (Type-C), which is located on the side of the EVF-11.
